

Red Light Rippers

"From the Trenches" CD

You'll Ride the Lightning with the latest **irons** that provide searing hot temps and polished plates to create the slip and results your clients crave.

1. There's a new band in town: iTech Tools by Hairart. The **Wet-&-Dry Ceramic Tourmaline Iron** is ultralightweight and features a honeycomb design for max airflow.

2. Get your groove on with the new **GHD Styler**, which has a rounder barrel for better waves; sleep mode; universal voltage; shiver mode (prevents damage due to internal condensation when room temps drop below 41° F); and super-sleek aluminum plates.

3. Hot style rockers Kevin Ryan and Frank Rizzieri's new **Rsession Tools** create concert-worthy waves with the new **Nalu Waver** that defines curls, loose waves or anything in between, and **Root Control**, a cred-boosting iron that provides lift and smoothness at the scalp.

4. **Rusk Professional Thermal Curling Wand** will *Light Your Fire* with a potential 428° F; 30 heat settings; a barrel that creates natural variation in curl size; and a fusion of ceramic and titanium for enhanced performance.

5. **Hot Tools SuperTools Helix** is a *Heavy Metal Machine* with its Pulse Technology—constant heat and rapid heat recovery system—ceramic plates and nanosilver housing. With a scorching heat capability of up to 430° F, the Helix features Floating Flexi-Plates and an 8-foot swivel cord.

6. You may be *Hell in High Heels*, but we bet you'll look *Pretty in Pink* with **Torlen Professional's** iron that features solid ceramic plates for maximum heat performance; scratch-resistant surfaces; and a 360° swivel cord for plenty of styling action.
